

EOS International

A Hosted Information Solutions Company of the Year

EOS International CEO Tony Saadat accepts the "Fastest 100" award for being one of the top 100 fastest growing companies in San Diego from Armon Mills, President & Publisher, *San Diego Business Journal*, and Reo Carr, Associate Publisher.

A passion for clients and an ingenious team of IT designers place EOS International among the top companies in the world based on growth and management. The world-class library information management software and services provider for corporate, legal, medical, and government special libraries celebrated its 25th anniversary by capturing a place among *San Diego Business Journal's* annual list of "Top 100 Fastest Growing Private Companies" – not once, but for four consecutive years. In addition, CEO Tony Saadat was named "Business Person of the Year" for 2005 by the San Diego Small Business Association (SBA).

Rankings of fastest growing companies are typically made up of new start-ups experiencing episodic expansion. EOS has maintained its impressive rate of growth since 2002 with a consistent stream of breakthrough library automation products and services, including EOS.Web and the popular ASP-hosted Global EOS e-Library Service.

EOS introduced EOS.Web three years ago with a vision to create a cost-effective Web-based Integrated

Library System (ILS) solution to simplify the way librarians and information center staff work. Today, due to market demand for multi-lingual products, EOS.Web is available in English, French, Spanish and Italian, all of which can be installed locally or hosted at the EOS Global Data Center, which is owned and operated by EOS International, located in Carlsbad, California.

Based on scalable Microsoft .NET technologies, EOS.Web provides rapid information delivery and management of both print and electronic resources to libraries worldwide. Libraries trust EOS to safeguard data, which is owned by the individual libraries and available to library staff at any time. Conferenza Episcopale Italiana (CEI), which is guided by the Vatican, utilizes EOS.Web for the new network of ecclesiastic libraries of the Italian Catholic Church. CBS News depends on EOS.Web to manage its film and tape library in addition to information research requests.

Regularly scheduled upgrades and enhancements are the result of the work of engineers who are driven by the

challenges that library managers face every day. For example, the company integrated RFID Tracking into EOS.Web in late 2006 in response to the need to automate check-in, check-out and in-circulation tracking of library materials. Without any action required from the library staff, materials virtually tell the database where they are as they enter and exit an office or cubicle. EOS clients never need lose a book, serial, file or other item again.

"Listening to our clients and the industry is at the core of our success," explains Saadat, whose legendary passion for close relationships with clients permeates the entire company. "I honestly love it when clients call to discuss a problem. We cannot exceed our clients' expectations unless we know their expectations."

Microsoft
GOLD CERTIFIED

Partner

EOS International is a Microsoft Gold Certified Partner with competencies in both Advanced Infrastructure Solutions and ISV/Software Solutions. The Advanced Infrastructure Solutions Competency is designed for partners with proven expertise in designing and/or implementing complex infrastructure solutions such as Active Directory®-based and Microsoft Integration Server design and deployment solutions, or Microsoft Exchange Server migration or deployment solutions. The Microsoft ISV/Software Solutions Competency recognizes EOS' successful record of developing and marketing packaged software based on Microsoft technologies.
